About Me

I am a developer and life-long learner who is committed solving tech problems while fostering both learning and growth. It has always been my belief that you are always both a teacher and a learner in web-development. The best solutions come from cultivating this relationship. I am committed to doing just that with clear reusable code in a clean and legible package, and thoughtful and effective communication.

Feel free to contact me to talk about anything tech related,
ramon.reyes.webdev@gmail.com

Skills

FrontEnd:	Javascript, React, Redux, HTML CSS
Backend:	Node.js, Express, MongoDB, Mongoose, Passport, bCrypt, PostgreSQL, Python
Workflow:	Github, TravisCI, Heroku, Mocha, Chai, Enzyme, NPM, Yarn
Design:	Adobe Photoshop, Illustrator, InDesign, Affinity Designer, Affinity Photo
Language:	English, Spanish, French

Recent Projects

Rephrase | <http://rephrase-it.herokuapp.com/>

We live in a large and diverse society and language barriers often make it difficult for us to properly communicate with each other. Rephrase aims to destroy language barriers by providing instant voice to text translations at the push of a button. With a team of developers using MongoDB, Socket.io, OAuth2.0, and Reactjs, we created an environment to easily facilitate the communication between two people who might otherwise not be able to communicate with one another.

Adoptme | <https://lit-caverns-27597.herokuapp.com/>

Have you ever wanted to adopt a pet but didn't know where to look? Adoptme aims to address this problem by acting as a hub for local shelters and pet-seekers. With the use of MongoDB, NodeJs, React, and GoogleAuth2.0, we created an application that allows shelters to add pets to a database and allows pet-seekers to search for those pets.

MandarinX | <http://mandarin-x.herokuapp.com/>

I have always loved learning languages and wondered if there was a way to easily learn a new language like Mandarin through spaced repetition. Mandarin X offers a collection of Mandarin flashcards to study. Created with MongoDB, React, and NodeJs, we designed it to repeat flashcard until the user chooses a correct answer. 试试看!

Flixzon | <https://flixzon.herokuapp.com/>

Sometimes you don't know whether what you want to watch by your service providers. Using NodeJs, MongoDB, and the MovieGo API, this application allows you to search shows. Once found, Flixzon tells you whether it is on Netflix, or Hulu, and provides additional information links, if available. My family members have found this usability to be very helpful.

Experience

Silicon Integration

Smt Checker

Milford, CT

7/06 – 1/16

When I began working at Silicon Integration, they needed someone with attention to detail to help inspect computer boards for smt errors. I helped ensure that a working, error free product was shipped out and that the company's reputation was maintained.

NICABM

Graphic Designer

Storrs, CT

1/06 – 7/06

When I started work at NICABM, the company was in the process of preparing for an annual conference. I was tasked with designing promotional material, updating the company website, creating the company's annual catalog.

Education

University of Connecticut

BFA, Graphic Design

2001-2006

THINKFUL

Web Development Intensive

6-30-2017

- Completed intensive, six month course on modern full stack JavaScript development.

- Learned industry best practices and practical software development standards by collaborating several hours every week with a senior web developer.
